## AVID MICROCHIP

How many “lost pet” signs have you seen? Millions of pets never make it home and are euthanized because they can’t be identified.

The best identification is permanent identification. It can’t be lost, and lasts for the lifetime of your pet. It is a microchip about the size of a grain of rice and is injected under the skin of your pet between the shoulder blades.

Animals of any age, and any size can receive the microchip. It just takes a short trip to your veterinarian, costs only \$35.00, only minutes to receive and is virtually painless.

When your pet is lost all the shelter or veterinary hospital has to do is scan the pet and retrieve the number. Once they have this number, Avid has all the information needed to find the owner. Your pet may only have to spend minutes in the shelter rather than days, weeks or never find their way home.

How does this work? The computer memory in the microchip contains a unique number, no two animals will ever have the same number. A radio signal is used to read this number through the skin of your pet. This number generates all the information you enter on the registration form.

*IT ONLY TAKES MINUTES FOR YOUR PET TO BECOME LOST, HELP THEM FIND THEIR WAY HOME.*
